

With four decades of experience and production facilities in both the United States and Italy, the Valme Group has become a prominent leader in the design and manufacturing of concrete distribution systems. Our unique strength is rooted in our extensive industry knowledge and manufacturing expertise, allowing us to develop products that perfectly meet our customers' needs.

We oversee all aspects of our product manufacturing processes, from product design and engineering to in-depth in-house manufacturing, which include the forging of couplings, casting of elbows, and heat treatment of pipes and reducers, while utilizing state-of-the-art equipment, such as automated laser cutting, welding, and robotic machining centers. All these manufacturing processes are controlled by our in-house proprietary chemistry and metallurgy lab.

Besides offering standard solutions, we also specialize in creating fully customized products.

Our products include:

- Complete boom and deck systems, including back-end kits for truck mounted concrete pumps.
- Full line of couplings forged in our own foundries.
- Complete line of heavy duty and metric hoses.
- Shotcrete nozzles and accessories supplied by ACME, a Valme company.
- Complete line of products designed for line pumping.
- Concrete placement booms.
- Shut off and diversion valves.

Valme products are ASME B30.27 certified and are ideal for a wide range of applications.
