How Does AirZuma Portable AC Germany Work?

The **AirZuma Portable AC Germany** works using an evaporative cooling system. Instead of using refrigerants or compressors like traditional AC units, it cools air naturally.

Here's how it works:

- 1.Fill the built-in water tank with cold water or add ice cubes for enhanced cooling.
- 2.The internal fan pulls warm air from the room.
- 3.The air passes through a water-soaked cooling filter.
- 4.The evaporation process naturally cools the air.
- 5.Fresh, cooler air is then circulated back into your personal space.

This method consumes much less electricity than a conventional air conditioner, making it a more energy-efficient option for personal cooling.
